

## PAYMENT-AS-A-SERVICE

Highly modern infrastructure as a service  
for reliability and smooth operation

More and more banks and financial institutions are deciding to entrust their payment transaction processes to a high-performance partner - and for good reason. Changing market requirements, instant payments with 24/7 operation and demanding regulatory requirements pose challenges that many companies, institutions and banks can hardly cope with on their own.

We offer our customers the secure operation of their payment transaction landscape in highly modern data centres for full or partial outsourcing as a service.

Our customers rely on secure data processing and smooth payment transactions. That is why we prioritise reliability as well as physical and technical operational security.

Continuous investment ensures our high standards and strengthens the ongoing trust in our services in the future as well

# P-a-a-S from Foconis Payment - a strong foundation for outsourced payment transaction processes

## HIGHEST SECURITY CERTIFICATION

We have carefully selected our partner data centres to ensure the highest standards. Both locations are technically at the latest standard of technology and must fulfil availability class 3 in accordance with DIN 50600. With this certification, we ensure that:

- maintenance can be guaranteed without interrupting operations.
- the required infrastructure is provided redundantly and fail-safe.
- the locations are safe from natural events such as flooding.

## CENTRAL PRINCIPLES AS THE BASIS OF OUR SERVICE

**Physical security:** Our data centres are equipped with extensive physical security measures to prevent unauthorised access.

**Energy efficiency:** We value sustainable energy practices in order to both protect the environment and optimise operating costs

**Operational excellence:** By utilising the latest technologies and strict operating processes, we ensure that the systems work efficiently and reliably at all times.

## ADDITIONAL SAFETY MEASURES

Our data centres are located around 200 km from each other. The geographical separation ensures that regional incidents cannot affect both locations at the same time.

In addition to the measures taken by the data centre operator, we have implemented our own security measures such as monitoring systems, additional physical security precautions and burglary protection.

## THE MOST MODERN TECHNOLOGY AND HIGHEST AVAILABILITY

We operate the most modern servers and highly efficient network infrastructures and have concluded the maximum possible maintenance contracts. We follow the 'N+1 principle' in all our processes and in the equipment of our data centres in order to avoid failures. This applies to the following areas:

- Connection
- Network topology
- Server
- Software operation
